SUMMARY: Senior Frontend Engineer with 15 years of experience shipping SaaS and e-commerce products, including Shopify ecosystem — the last 12 fully remote. Deep expertise in React, TypeScript, and Node.js. Brought frontend production errors to zero and cut release cycles by 50% through AI agent workflows and stronger engineering practices. Works across the full stack and is equally comfortable leading a team or going deep as an IC.

Professional experience

Littledata

Remote / London, UK

The top performing data layer service for Shopify that fixes analytics data and improves multi-channel ad performance

Senior Frontend Engineer (Feb 2025 – Present)

- Performed migration from MeteorJS legacy app to modern React, TypeScript, Remix, and NodeJS
- Shipping features end-to-end (ownership, fullstack experience, collaboration with PM, designer, QA)
- Cut client-facing production issues to zero through stronger engineering practices, QA and AI agentic workflows
- Reduced “design, engineering, QA” cycle time by ~50% via workflow improvements and training
- Improved frontend delivery time by ~30% by organizing design system in Storybook and Chromatic
- Rolled out shared AI-assisted engineering tooling/workflows used across teams for bug-fixing, prototyping, QA, deploys
- Led the modernization of observability and E2E testing, focusing on measurable reliability and performance metrics.
- Deployed services to bare metal servers using via GitHub Actions CI/CD pipelines
- *“Made the rebuild possible and transformed our engineering culture”* — product management on my recent work

Vectary

Remote / Bratislava, Slovakia

VC-backed scale-up, interactive platform for 3D, CAD, AR/XR/VR real time collaboration, including 3D editor

Senior Frontend Engineer (Mar 2021 – Feb 2025)

- Led the delivery of redesigned React/TypeScript apps improving measured performance (10x faster loading)
- Reduced monorepo build times and CI/CD costs (20x faster, 30% cheaper)
- Managed a large monorepo (45 packages), migrated from Bitbucket, Jenkins and AWS to GitHub and Github Actions
- Cut design/development cycles in half with a component library/design system in Storybook and Chromatic
- Introduced performance and architecture improvements to an API Gateway service (NodeJS, Nginx)
- Improved 3D model viewer app performance with a new build system (Vite, WebGL, ThreeJS, React Three Fiber)
- Built lead gen AI chatbots for enterprise sales with security guardrails and agentic testing, local LLM (on CPU)
- Initiated, implemented automated E2E testing (Cypress, Playwright, Browserstack, Github Actions, Bitbucket pipelines)
- Strengthened engineering workflows, resulting in a 30% reduction in feature cycle time via automated CI/CD pipelines
- Built and maintained product analytics pipelines with the data team (NodeJS, Google BigQuery, AWS, GCP, Airflow)
- Raised standards for stability, performance, and observability (ELK, Sentry, uptime monitoring/alerts)
- Pioneered AI-assisted engineering in a secure setup (Devcontainers, Cursor, Github Copilot)

LimeX

Remote / Larnaca, Cyprus

Online/mobile TV and video-on-demand streaming platform with millions of active users, 2500 channels in 50 languages

Senior Frontend Engineer (Oct 2020 – Mar 2021)

- Established a design system that unblocked rapid app launch (2–3 weeks)
- Launched multi-platform apps (mobile/web/desktop/smart TV)
- Built a new web platform (Typescript, React, Ruby on Rails, Postgres), internal analytics tooling, including REST APIs

SlidePresenter

Remote / Frankfurt, Germany

UI engineer (July 2019 – October 2020)

- Owned the entire UX/UI area: design system and UI components, translating business team requests into concepts, supporting frontend implementation with guides and feedback loop, built prototypes and demos to get top tier clients
- Initiated and completed transition to modern design tool (Figma) and design system

Fohlio

Remote / New York, US

Senior UI/UX designer (July 2018 – Feb 2019)

- Built a consistent design system and designed new features for a proptech web SaaS, led a website redesign (3x website trial conversion)

Wecudos

Remote / London, UK

UI engineer (Jan 2016 – July 2018)

- Designing and building landing web apps and marketing website as a designer and full-stack developer (EmberJS, ReactJS, Ruby on Rails, Postgres, MongoDB), cross-platform and native mobile apps (Cordova, React Native)

Brandy mint

Hybrid / Cheboksary, Russia

Product engineer (Nov 2011 — Dec 2015)

- Contributed to an e-commerce SaaS startup from day one (ecommerce constructor and marketplace, similar to Shopify; Ruby on Rails, Postgres, React, BackboneJS) with numerous integrations (delivery, taxes, marketing)
- Previously, in an outsource dev team working with startups, launched 20+ products: SaaS, mobile, enterprise back-office (React, Angular, Ember, Backbone, Ruby on Rails, Postgres)

Education

Moscow Institute of Physics and Technology (State University) (MIPT)

Engineering Physics/Applied Physics

2005 – 2007

Additional information

Languages: Russian (native), English (C1), Serbian (professional proficiency) | Portfolio/Blog: alexmesch.com

SKILLS: React | TypeScript | JavaScript | Node.js | Ruby | Frontend Architecture | Design Systems (Storybook, Chromatic) | Testing (E2E, Unit, Integration, AI) | Performance Optimization | Observability (Sentry, ELK) | REST APIs | GraphQL | Docker | CI/CD Pipelines (GitHub Actions, CircleCI) | Cloud platforms (AWS, GCP) | Monorepos | Build systems (Vite, Webpack) | Playwright | Cursor | Claude Code | Codex | Github Copilot | Product Collaboration | Distributed teams | Product ownership | AI-assisted Engineering | AI Agent Workflows | LLM Integration
